SUMMARY

Data Analyst with a UI/UX design background, skilled in SQL, Python, and Power BI. Experienced in building automated KPI dashboards and translating large, complex datasets into clear, data-driven decisions. Developing machine learning and data structures & algorithms (DSA) skills to grow into data science.

EDUCATION

Indian Institute of Technology (IIT) Patna

Bachelor of Technology (B.Tech) in Mechanical Engineering

2024 – 2028

WORK & LEADERSHIP EXPERIENCE

Inditronix AI Labs | UI/UX Design Intern

Nov 2025 – Present

- Engineered 15+ production-ready UI components from concept wireframes, slashing design handoff delays by 35% across web and mobile applications.
- Partnered with cross-functional engineering teams to standardize design systems, resolving 20+ technical constraint bottlenecks prior to sprint deployment.
- Optimized core interface navigation based on feedback from 40+ user testing sessions, elevating task completion efficiency by 22%.

E-Cell, SCME, Syahi, InvisionX, NSS, SevaUtsav (IIT Patna) | Design Sub-coordinator / Co-Lead

Aug 2025 – April 2026

- Spearheaded visual identity, branding strategy, and marketing creative assets across flagship institutional events and student-body initiatives.
- Mentored junior designers and established streamlined production workflows that accelerated turnaround times across concurrent project pipelines.

KEY PROJECTS

Financial Fraud Detection & Risk Engine | PostgreSQL, SQL, Python, Machine Learning, Power BI

- Built an end-to-end fraud detection pipeline on 10K+ transactions with severe class imbalance (1.51% fraud rate), using SMOTE and stratified sampling to handle skew instead of relying on misleading accuracy metrics
- Engineered behavioral risk features in SQL (window functions, LAG()) transaction-velocity analysis, merchant/customer risk aggregation) that surfaced key fraud drivers — location mismatch transactions (8.40% fraud rate) and low device-trust transactions (6.24% fraud rate)
- Designed a Power BI Fraud Operations Hub tracking fraud volume, flagged transaction amount, and merchant/device risk signals for fraud-ops monitoring

E-Commerce Sales & Customer Analytics Dashboard | SQL, Power BI, DAX, Python

- Built an end-to-end Power BI dashboard analyzing 51,289 sales records totaling \$12.64M in revenue and 178.31K units sold, using a star schema data model and advanced SQL (CTEs, window functions)
 - Designed interactive visuals across 7+ countries and 4 global markets (US, EU, APAC, LATAM), with the US market alone contributing 34.69% of top-country sales (\$2.3M)
 - Analyzed shipping mode distribution, finding ~60% of revenue (\$7.58M) shipped via Standard Class, informing logistics cost optimization discussions
- Developed a 5-tier RFM customer segmentation model and Pareto (80/20) SKU analysis to support targeted retention and inventory optimization strategies

OLA RideBookings Data Analysis | SQL, Power BI

- Engineered complex SQL queries to clean, transform, and analyze 20,000+ OLA ride booking records, evaluating booking status and revenue distribution.
- Uncovered key drivers behind ride cancellations across 5 vehicle categories, identifying peak-hour demand windows responsible for revenue drop-offs.
- Constructed an interactive Power BI dashboard tracking 10+ real-time revenue KPIs, payment method preferences, and cancellation trends.

TECHNICAL & CORE SKILLS

Data Analysis & Cleaning: SQL (PostgreSQL/MySQL), Python (Pandas, NumPy), Advanced Excel (Pivot Tables, VLOOKUP, Power Query), MATLAB, Data Wrangling, EDA

Data Visualization & BI: Power BI

Programming Languages: Python, C++, C, SQL, MATLAB

Engineering & Design: ANSYS, SolidWorks (CAD), Figma, Canva, Wireframing, User Research
